

SECURITY MONITOR, DETECT, ALERT

SECURITY AND PEACE OF MIND FOR YOUR PROPERTY ASSETS

Do you have a rural property, perhaps a vineyard or olive grove. Our active security and monitoring systems will allow you to be “there” 24 hours a day, 7 days a week, from any location on the planet.

You can view live colour images, video and sound from your property on your mobile phone, PDA, smart phone, laptop or desktop PC.

Receive SMS alerts when “environmental” events occur. This could be a change in temperature, humidity, air flow or other event such as fire that could lead to a “failure” on your property. Audio monitors can be installed to “listen” for alerts such as a smoke alarm or an “air low” alert from your Envirocycle treatment system. Motion and change detectors will let you know when someone has entered your property or your goods have been moved.

Alerts sent to your mobile phone, PDA or email address will inform you within seconds of an “event” be it a change in water levels, failure of an electric fence or check on the condition of your produce or live-stock, or general security breaches.

Utilising the latest in solar power technology and mobile telephone technology means that any location can be secured and monitored. There is no need for any services or infrastructure to be in place in order to use our systems they can be mains or solar powered and utilize the wireless mobile network for communications.

Meridian can provide you with a complete end to end solution which can be customized to the exact configuration needed including the design and implementation of a security system, the provision and installation of broadband facilities both at your property and your home or office including smart phones and PDA devices that you can use to monitor your property assets via the web.

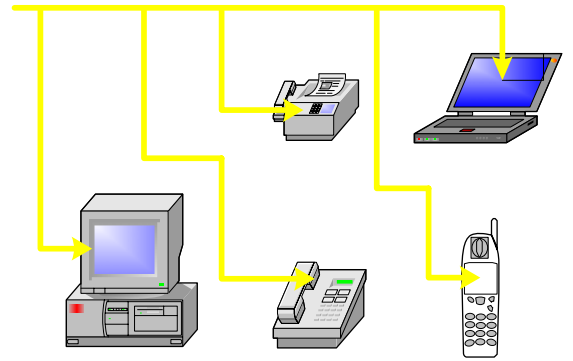

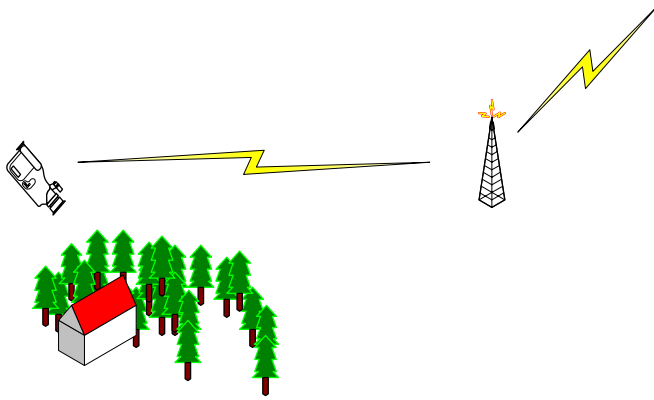

Wireless installations reduce setup and maintenance costs ensuring that monitoring devices can be placed exactly where you need them.

The systems use the most robust encryption and security to ensure there is no illegal intrusion or compromise of your wireless network.

Monitoring devices

KEEP AN EYE ON YOUR RESOURCES

Keep an eye on your vineyard or livestock from your office.

Keep an eye on electric fences: send a simple text message from your mobile phone and receive accurate information on the fence voltage, battery status and the status of the dry contact switch input from wherever you are - 24 hour monitoring on the voltage performance of your fences. Receive instant notification via text message of fence line faults enabling fast response to prevent loss of stock.

Keep an eye on water, use a water tank level indicator to monitor critical water levels and prevent running out of water, stock distress or loss. Set the critical water level to suit your needs and adjust as required.

Keep an eye on doors or gates to create a remote self-powered alarm system. You will be notified immediately via text message or email alarm if a monitored door or gate is opened or closed.

Keep an eye on your equipment or machinery, receive a notification the moment your equipment has been moved.

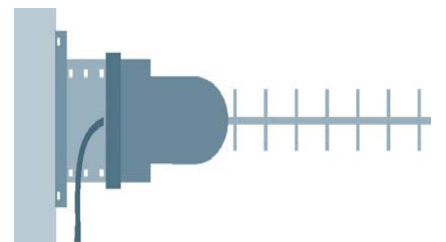

WHEN YOU RECEIVE AN ALERT YOU CAN USE THE INTERNET TO CHECK ON THE LOCATION AND SEE WHAT IS HAPPENING!

FULL CONTROL FROM YOUR WEB BROWSER

From your web browser you can control installed cameras—panning and tilting, with full zoom capability. Infrared and thermal imaging cameras are available which remove the need for floodlights and other infrastructure.

Data can be stored digitally which means it can be accessed from anywhere. Systems can be configured to transmit images and other status information on predetermined or programmed times.

Cameras and devices located on your property and pictures via wireless internet

MERIDIAN RURAL PROPERTY SERVICES FULL PROPERTY MANAGEMENT SERVICES

We offer full property management services including weed eradication and control (Chem-Cert accredited), rural fencing, and property management.

Purchasing a rural property is just the beginning. Proper advice and planning will increase both the value and productivity of your farm. We can prepare and implement a plan to best suit your requirements in areas such as: what your land is best suited for, stock management, where sheds, stockyards, windbreaks, dams, roads, fences, gates, etc should be placed.
